Helsinki Institute for Information Technology (HIIT) has several open positions in the area of statistical machine learning, with focus areas on high-dimensional and structured data, inference on intractable models, complex systems and interactive intent modelling.

HIIT does top-level research, seamlessly moving between fundamental methods and technologies to novel applications and their impact on people and society. For further details about the open positions, visit: https://www.hiit.fi/node/2857

For the application procedure, see here:
